General Note: Details may not sum because of rounding. The percents were calculated before any rounding occurred. Rounding error will be more prominent for small counties.

Explanation of Margin of Error:

A margin of error (MOE) is the difference between an estimate and its upper or lower confidence bounds. Confidence bounds can be created by adding the margin of error to the estimate (for an upper bound) and subtracting the margin of error from the estimates (for a lower bound). All published margins of error for the Small Area Health Insurance Estimates program are based on a 90 percent confidence level.
