

Troubleshooting the 2020 LUCA Program

Big Sky GeoCon
Wednesday April 18, 2018

Jim Castagneri
Geographer
U.S. Census Bureau

Things to Consider

General Considerations

- Have any staff changed since you signed up?
- Are you keeping track of your 120 day clock?
- Do you need to add new reviewers?

Using GUPS?

- Have you extracted the address data to your local drive?
- Remember to Key-in you full password including the exclamation mark; “!”
- Do you have Admin Rights on your computer?
- Import your local address list

Prepare your address list

- Separate your residential addresses from all other types
- Consider using the Census Geocoder to evaluate your addresses:
 - <https://geocoding.geo.census.gov/geocoder/>
- Use this document to format your list:
 - <https://sites.google.com/site/censusgis/course-materials>
 - Digital Address list Format for Geocoder.docx

General GIS Issues

- Create an address list from a point coverage
- Create a block count list to compare with Census, see;
 - <https://sites.google.com/site/censusgis/course-materials>
“How to compare your address blocks with Census block counts.docx”
- Edit only the Census Bureau’s address list
- Don’t ‘delete’ records from the address list...mark them with a ‘D’ in the action field.
